# Nattanitcha Promboon

STORY & WORLD-BUILDING · CHARACTER × TECH · CO-OP INTERN

nattanitchafarm@gmail.com
Portfolio

**Full-time co-op · 13 Jan – 28 May 2027**

## EDUCATION

**King Mongkut's University of Technology Thonburi (KMUTT)**
B.Sc. Media Technology
2023 – present · co-op track
**GPA 3.61 / 4.00**

**Wittayanukulnaree School**
Science–Mathematics–Technology & Environment program

## SKILLS

**Story & world**
Long-form fantasy writing · world & lore design · lore/character reference docs

**Design / Prototyping**
Character design & illustration · character sheets · UI & motion design · CAD → 3D printing · soldering · sewing & embroidery

**Electronics**
ESP32 · Arduino · Hall sensors · addressable LEDs

**Tools**
Figma · Godot (prototype) · Blender · Maya · Photoshop · Illustrator · Adobe Animate · Tinkercad · SolidWorks (learning) · VS Code · Word · Excel · PowerPoint

**AI workflow**
Direct AI agents (Claude Code, Codex, Antigravity) with work orders that quote my requirements word for word; a separate reviewer checks each output; repeat runs and compare them, like checking a research instrument's reliability; log every step. Designer, not a programmer by background.

## AWARDS & ACTIVITIES

**1st Place** — KMUTT Deep Sea Jam Hackathon 2026 (DeepCore)
**Staff** — FANTASTECH Media Exhibition 2026, KMUTT
**Freelance** — commission illustration & handmade dolls (ongoing)

## LANGUAGES

Thai — native
English — working proficiency (reading & writing technical documents)

## PROFILE

I write an original Thai fantasy series and design its world — races, a layered power system, history and 10+ main characters. Draft so far: volume 1 complete, volume 2 unfinished (~50 chapters in all). Now rewriting the series, starting from its lore and character sheets. I also design characters and systems that make them act as if they have a life — in chat, game mods and a small robot. Year-4 Media Technology student. I set the rules, notice where a character stops feeling natural, and decide what changes. Designer, not a programmer: I direct AI to write most of the code to my spec and check the results myself.

## SELECTED PROJECTS

**Original fantasy novel series** — writing & world design — rewriting (lore & character sheets stage)

- I write all the prose myself — no AI writing.

**OC Chat** — a chat where every message comes from a character's life — 2026 · in progress

- A chat app where you know not just what a character says but what it is doing as it types — where it just came from, why it hasn't read yet. Code runs each life (world clock, seasons, places, chained daily routines, who is where doing what); the AI only writes the words. My rule: a status is what a character is doing, not how they feel. Mood and physical condition (like being sick or drunk) are tracked separately, and all three shape how the character writes.
- Core: original characters (OCs) chatting with each other; chatting with them yourself is an add-on where the character always replies, since in the planned app users will pay per message. Several bubbles appearing at typing speed; calls on trial (characters can call you; calling them is not built yet); memory you can edit or delete; one Gemini call per character turn.
- My role: designed the world and life rules; spotted what felt unnatural and set the problem (examples in prompts got copied; strict 1:1 turn-taking didn't read like people); made the calls. AI did the code, bug-hunting, testing and competitor research; I tried rival apps myself.
- **Aljah**, one of my original characters, helps reply on the Mofych Facebook page as a friend. I choose per person whether he replies on his own or drafts for my review: customer and order messages I check myself; general messages (greetings and casual chat) he can answer alone. Has posted to the page on his own; still in testing, not yet handling real orders.

**Character design & animation** — story cast — selected work

- Turnaround sheets with palettes for my story's cast; three Adobe Animate course pieces (Aljah & Leon clip, horror short, LINE sticker set).

**Stardew Valley mod** — companion NPC + Thai word-wrap & dialogue mods — Year 4, Term 1 (2026)

- Companion NPC Raphael with his own daily routine who can follow you, lead you somewhere or come to visit, plus a Thai word-wrap mod. My calls: one command at a time (a new one clears the last); for a planned party system, companions will surround the player instead of queuing, so no one looks left behind; a packed lunch on days working away; fix Thai line breaks at code level. Redrew Raphael's walking sprite on Sebastian's body base (Seasonal Cute Characters, Poltergeister) and drew item art (orange cake, macaron); directed the script and the rest of the pixel art as designer and director.

**METO** — small interactive robot — Research → thesis · 2025–present

- Research on whether a robot that shows emotion helps beginners learn block coding differently from one that does not; led a 3-person team (study with first-year students planned; ethics documents in preparation). Designed and animated its 9 screen expressions; its camera reads the learner's facial expressions, and it turns to follow and mirrors them on its screen.
- "METO Robot" web: designed the screens and drew the 62-piece avatar; a skill counts only when code runs error-free; no XP/level terms on the teacher side; the AI helper gives hints, not answers.

**Mygame** — survival / management game (Godot) — two small prototypes

- Three layers: survival basics (eat, sleep, rest) stay simple and reliable, like This War of Mine / Sheltered; managing people is the player's job; character traits drive relationships and events. Two small working Godot prototypes (trait-driven characters; injury & exploration) with automated tests; not a finished game. 22 traits in the prototype, 100+ planned; characters follow scoring rules I designed (rule-based, no LLM).

**MOFYCH Commission Website** — honeykung.github.io/commission-tag

- Designed the whole site in Figma as "art + web" (hand-drawn clouds and logo, my own animation); tag sign-up with email alerts and email-confirmed cancellation; queue sheet on Google Apps Script; paint matcher across 1,131 paints from 5 brands — I transcribed most brand colour charts and checked the rest against published data; set the $\Delta E < 5$ target; AI wrote the standard matching formulas.
