# Nattanitcha Promboon

STORY & WORLDS · CHARACTERS & TECH · CO-OP INTERN

nattanitchafarm@gmail.com
Portfolio

**Full-time co-op · 13 Jan – 28 May 2027**

## EDUCATION

**King Mongkut's University of Technology Thonburi (KMUTT)**
B.Sc. Media Technology
2023 – present · co-op track
**GPA 3.61 / 4.00**

**Wittayanukulnaree School**
Science, Mathematics, Technology & Environment program

## SKILLS

**Story & world**
Fantasy writing · world/lore design · character references

**Design / Prototyping**
Character art & sheets · sewing & embroidery · UI/motion · soldering · CAD & 3D printing

**Electronics**
Wiring & soldering · ESP32, XIAO ESP32S3 Sense, Arduino · motors & servos · Hall, ultrasonic & light sensors · OLED & LED strips · 18650 + BMS, USB-C

**Tools**
Figma · Godot (prototype) · Blender · Maya · Photoshop · Illustrator · Adobe Animate · Tinkercad · SolidWorks (learning) · VS Code · Office

**AI-assisted coding**
I direct AI coding agents (Claude Code, Codex, Antigravity) with written specs. A second AI reviews code and test results. I verify results.

## AWARDS & ACTIVITIES

**1st Place**: KMUTT Deep Sea Jam Hackathon 2026 (DeepCore)

**Staff**: FANTASTECH Media Exhibition 2026, KMUTT

**Freelance (ongoing)**: commission illustration & handmade dolls

## LANGUAGES

Thai: native
English: working proficiency (technical reading & writing)

## PROFILE

Write an original Thai fantasy series and design its world as a fourth-year Media Technology student. Define and refine character behaviour for chat apps, game mods and a small robot. Set requirements, direct AI to write most of the code and check results.

## SELECTED PROJECTS

**Original fantasy novel series** — solo writing & world design

- Wrote the full first-volume draft and part of volume two of an original Thai fantasy series, about 50 chapters in all. Designed its races, layered power system, history and 10+ main characters. Keep world and character references for continuity. Am rewriting the series, starting with lore and character sheets.

**OC Chat:** chat grounded in characters' daily lives — 2026 · in progress

- Designed a character-to-character chat app linking messages and unread states to simulated daily events. Code controls the world clock, seasons, locations and routines. The language model generates dialogue. Defined status as what a character is doing, with mood and physical condition tracked separately. All three shape the dialogue.
- Directed the build and testing of original-character chat rooms, paused since September 2026 to reduce API costs. Added user-to-character rooms with guaranteed replies for planned paid-per-message use. Calls are experimental and one-way: characters can call users, but users cannot call them yet.
- Defined life rules and problems to fix when the model copied prompt examples and rigid alternating turns felt unnatural. AI handled all code, bug-hunting, testing and competitor research. I also tried competing apps.
- **Aljah**, one of my original characters, helps reply on the Mofych Facebook page as a friend. He answers general messages, such as greetings and casual chat, on his own and has posted to the page himself. I check customer and order messages myself, and for each person I choose whether he replies or drafts a reply for me. Still being tested and has not handled real customer orders.

**Character design & animation:** story cast — selected work

- Drew turnaround sheets and palettes for my story's cast. Created three Adobe Animate works: an Aljah & Leon clip, a horror short and a sticker set sold in the LINE Store.

**Stardew Valley mods:** companion & Thai dialogue — Year 4, Term 1 (2026)

- Designed Raphael's routines and follow, guide and visit behaviours, plus Thai dialogue word wrapping. Specified one active command, replaced by each new command. In the planned party system, companions will surround the player instead of queuing. Redrew Raphael's walking sprite on Sebastian's body base (Seasonal Cute Characters, Poltergeister) and drew all item art and icons except the key. Directed the script.

**METO:** small interactive robot — Research → thesis · 2025–present

- Lead a 3-person thesis team comparing beginner learning with and without robot expressions. A first-year student study is planned, with ethics documents in preparation. Designed and animated 9 screen expressions. The camera reads learners' expressions so the robot can turn towards them and mirror their expressions on screen.
- Designed the local "METO Robot" block-coding web screens and drew the 62-piece robot avatar. Defined progress as code running without errors and used classroom language in the teacher interface. The AI helper gives hints.

**Mygame:** survival / management game (Godot) — two small prototypes

- Designed predictable survival needs, player-led people management and character-driven relationships as three gameplay layers, drawing on This War of Mine and Sheltered. Directed two small working Godot prototypes for trait-driven characters and injury/exploration, with automated tests. The game is unfinished, with 22 traits prototyped and 100+ planned. Characters choose actions through scoring rules I designed rather than a language model.

**MOFYCH Commission Website** — honeykung.github.io/commission-tag

- Designed the whole site in Figma as "art + web", with my hand-drawn clouds, logo and animation. Added email opening alerts, email-confirmed cancellations and a Google Apps Script queue sheet. The matcher covers 1,131 paints from 5 brands. Transcribed most charts and checked the rest against published data. Set a colour-difference target of $\Delta E < 5$ (lower is closer). AI implemented the standard CIEDE2000 formulas from my requirements.
