STORY & WORLDS · CHARACTERS & TECH · CO-OP INTERN

nattanitchafarm@gmail.com
Portfolio

Full-time co-op · 13 Jan – 28 May 2027

EDUCATION

King Mongkut's University of Technology Thonburi (KMUTT)
B.Sc. Media Technology
2023 – present · co-op track
GPA 3.61 / 4.00

Wittayanukulnaree School
Science, Mathematics, Technology & Environment program

SKILLS

Story & world
Long-form fantasy writing · world & lore design · lore/character reference docs

Design / Prototyping
Character design & illustration · character sheets · UI & motion design · CAD → 3D printing · soldering · sewing & embroidery

Electronics
ESP32 · Arduino · Hall sensors · addressable LEDs

Tools
Figma · Godot (prototype) · Blender · Maya · Photoshop · Illustrator · Adobe Animate · Tinkercad · SolidWorks (learning) · VS Code · Word · Excel · PowerPoint

AI workflow
I direct AI agents (Claude Code, Codex, Antigravity) using work orders with my exact requirements. A second AI reviews each output. I repeat tasks, compare results and log every step.

AWARDS & ACTIVITIES

1st Place: KMUTT Deep Sea Jam Hackathon 2026 (DeepCore)
Staff: FANTASTECH Media Exhibition 2026, KMUTT
Freelance: commission illustration & handmade dolls (ongoing)

LANGUAGES

Thai: native
English: working proficiency (reading & writing technical documents)

PROFILE

Fourth-year Media Technology student writing an original Thai fantasy series and designing its world. I design characters and their behaviour in chat apps, game mods and a small robot. I set behaviour rules and decide what to change when characters feel unnatural. My role is design: I specify requirements, direct AI to write most of the code and check the results myself.

SELECTED PROJECTS

Original fantasy novel series: currently rewriting and developing lore and character sheets
writing & world design

- Thai fantasy series, written solo. Volume 1 is drafted in full and volume 2 is unfinished, about 50 chapters in all. I designed its races, a layered power system, its history and 10+ main characters, and I keep lore and character reference documents to check continuity. I am rewriting it, starting with the lore and character sheets.

OC Chat: a chat where every message comes from a character's life — 2026 · in progress

- A chat app that shows what characters are doing as they type, where they have been and why messages remain unread. Code simulates their lives through a world clock, seasons, locations and linked daily routines. AI writes only their dialogue. My rule is that a status describes what a character is doing, not how they feel. Mood and physical condition, such as being sick or drunk, are tracked separately. All three shape how the character writes.
- Core: original characters (OCs) chat with each other. These rooms are built and tested, and paused since September 2026 to save API cost. Chatting with them yourself is an add-on where the character always replies, since users will pay per message in the planned app. Calls are experimental: characters can call you, but you cannot call them yet.
- My role: I designed the world and life rules, spotted what felt unnatural and defined the problems. Examples in prompts got copied, and strict 1:1 turn-taking did not read like people. AI did the code, bug-hunting, testing and competitor research. I tried rival apps myself.
- **Aljah**, one of my original characters, helps reply on the Mofych Facebook page as a friend. He answers general messages, such as greetings and casual chat, on his own and has posted to the page himself. I check customer and order messages myself, and for each person I choose whether he replies or drafts a reply for me. Still being tested and has not handled real customer orders.

Character design & animation: story cast — selected work

- Turnaround sheets with palettes for my story's cast. Three Adobe Animate course pieces: an Aljah & Leon clip, a horror short and a LINE sticker set.

Stardew Valley mod: companion NPC + Thai word-wrap & dialogue mods — Year 4, Term 1 (2026)

- Raphael, a companion character, follows his own routine and can follow you, guide you or visit. A Thai word-wrap mod fixes Thai dialogue line breaks in code. My decisions include allowing one command at a time, with a new command clearing the last. In a planned party system, companions will surround the player instead of queuing, so no one looks left behind. I redrew Raphael's walking sprite on Sebastian's body base (Seasonal Cute Characters, Poltergeister) and drew item art (orange cake and macaron). As designer and director, I guided the script and the rest of the pixel art.

METO: small interactive robot — Research → thesis · 2025–present

- My research asks whether a robot that shows emotion helps beginners learn block coding differently from one that does not. I lead a 3-person team. A study with first-year students is planned, and ethics documents are in preparation. I designed and animated its 9 screen expressions. Its camera reads the learner's facial expressions, and it turns to follow and mirrors them on its screen.
- "METO Robot" web: I designed the screens and drew the 62-piece avatar. A skill counts only when code runs error-free. The teacher interface avoids game terms such as XP and levels. The AI helper gives hints, not answers.

Mygame: survival / management game (Godot) — two small prototypes

- Three layers: simple, predictable survival (eat, sleep, rest), people management by the player, and character-driven relationships and events. Survival references: This War of Mine / Sheltered. I made two small working Godot prototypes for trait-driven characters and injury and exploration, with automated tests. This is not a finished game. The prototype has 22 traits, with 100+ planned. Characters follow scoring rules I designed, using rules rather than an LLM.

MOFYCH Commission Website — honeykung.github.io/commission-tag

- I designed the whole site in Figma as "art + web", with hand-drawn clouds and logo plus my own animation. Opening alerts use email sign-ups and email-confirmed cancellations. The queue sheet runs on Google Apps Script. The paint matcher covers 1,131 paints from 5 brands. I transcribed most brand colour charts and checked the rest against published data. I set the $\Delta E < 5$ target, and AI wrote the standard matching formulas.
